^{35}Ar production:

2012Zh06: ^{9}Be,^{181}Ta(^{40}Ar,X) at E(^{40}Ar)=57 MeV/nucleon at HIRFL. Measured momentum distributions and production cross sections of fragments. Observed competition between projectile fragmentation and other mechanisms. Compared with EPAX, abrasion- ablation, and HIPSE models. Studied target dependence of fragment cross sections. 35AR c 2007No13: ^{181}Ta(^{40}Ar,X) at E(^{40}Ar)=100 MeV/nucleon at RIKEN. Measured fragment momentum distributions and production cross sections.

^{35}Ar radius measurements:

2002Oz03: C(^{35}Ar,X) at E(^{35}Ar)≈950 MeV/nucleon at RIKEN. Measured interaction cross sections. Deduced effective radii and proton skin features.

2000Ge20: ^{35}Ar produced at ISOLDE. Measured β asymmetry and hyperfine structure using β-NMR spectroscopy. Deduced mean squared charge radii and quadrupole moments.

1996Kl04,1995KlZZ: ^{35}Ar produced by ISOLDE. Measured isotope shifts and hyperfine structure using collinear fast-beam laser spectroscopy. Deduced mean square charge radii and electric quadrupole moments.
